SKILLS

Private Pilot.
MATLAB.
SolidWorks.
SolidWorks Simulation.
3D Printing and Prototyping.
C/C++ Programming.
STM32/Embedded Systems.
Git/Version control.
Electronics Troubleshooting and Soldering.
Betaflight.

EDUCATION

University of Texas at Arlington
B.S. Aerospace Engineering
*(2025- **Fall 2028**)*
***GPA**: 3.9*

Chennault Aviation Academy
Private Pilot Certificate (2023-2025)
Single Engine Land

Sam Houston State University
Computer Science (2021-2023)
***GPA**: 3.74*

HONORS/AWARDS

University of Texas at Arlington
Dean's List — *2026*

Sam Houston State University
Dean's List — *Fall 2021, Spring 2022, Fall 2022*
President's List — *Fall 2021, Spring 2022*

PROFILE

AE student at UT Arlington and licensed private pilot. I build things outside of class because I genuinely want to understand how they work. Right now, I'm working on a ball balancing platform built around an STM32, using inverse kinematics and PID control. Interested in aerospace structures, propulsion, and the systems that make flight possible.

EXPERIENCE

The Home Depot - Dallas, TX

- Provided technical product guidance to 30+ customers per shift, using precise measurement tools to improve purchase accuracy.
- Assisted contractors with material quantity calculations for structural projects.

PROJECTS

VictoryUlasi.com/projects

Intro to Engineering design Final Project – MAE 1351

- In a team of 4, designed and 3D printed a fully automated Arduino-controlled mechanism capable of acquiring and delivering ping pong balls into a target cup from 6 feet away within 30 seconds.
- Integrated DC motors, drive wheels, and buck converters into a self-contained battery-powered system, managing power regulation and motor control through custom firmware.

Thrust Stand – Personal

- Designed and fabricated a motor thrust stand using a 10kg load cell, HX711 amplifier, and NUCLEO-F446RE, logging real-time force and current data via MATLAB.
- Currently used to characterize motor and propeller performance for drone diagnostics and performance validation.

F405 Drone Build – Personal

- Assembled a fully functional drone from components including ESCs, flight controller, and motors, performing all wiring and soldering.
- Configured flight parameters and PID tuning in Betaflight.

MATLAB Beam Solver – MAE 1312 Engineering Statics

- Developed a MATLAB beam solver for statically determinate pin-roller beams, computing support reactions via matrix equilibrium equations and outputting shear force and bending moment diagrams.
